SECRET

ACCOMPLISHMENTS

30 NOV 1966

III. PHYSICAL SECURITY

a. Physical Security

1. Overseas Surveys

Security surveys were conducted at bases and stations in Africa, Latin America and the Near East. A special survey of Agency facilities in provinces was also completed.

3. Protection of Personnel Overseas

In coordination with TSD/DDP and in collaboration with the Department of State, a research effort was initiated to develop methods of protecting personnel from flying glass caused by terrorist activities. Extensive tests have been completed, the results of which are currently being reviewed and evaluated.

6. Closed Circuit TV

25X1

An exterior security closed circuit TV is now being installed When completed, a guard posted at the main warehouse will be able to monitor the entire compound. In addition to increasing efficiency, an entire guard post will be eliminated.

7. Reproduction Machines

An extensive research program has been completed which revealed that a capability exists for surreptitiously obtaining images of classified documents from standard office reproduction machines. A report of this finding was presented to the Security Committee of the USIB. Technical briefings have been given to representatives from ACSI, State, NSA and ONI.

8. ARFCOS Procedures

A representative of the Physical Security Division participated in the overseas review of ARFCOS facilities and procedures as a member of a special study group under the direction of the Joint Chiefs of Staff. Improvements were recommended.

9. Training of Overseas Personnel

25X9

A total of Agency personnel scheduled to go overseas were provided training in physical security procedures and equipment such as installing and maintaining alarm systems, repair of safekeeping equipment and the proper handling and

use of document destruction devices. Agency personnel destined for overseas posts were also provided training and familiarization courses in firefighting, riot control and general safety subjects.

10. President's MISSION SAFETY-70

In support of this program, an additional professional employee was assigned to the Physical Security Division to assist the Agency in meeting the Presidential objectives. He has initiated a program to brief new employees on "SAFETY-70" and has prepared and disseminated appropriate notices concerning the program to Headquarters components and field stations. ✓

11. Perimeter Protection Alarms

Out of a number of new alarm systems being studied, a seismic wave technique has been identified as possessing excellent potential in affording perimeter protection for installations outside of Headquarters. Preliminary field tests have been completed.

12. Headquarters Guard Program

In coordination with General Services Administration a survey was conducted of the guard conditions at the Headquarters Building. As a result of this survey approximately 29 guard positions were eliminated by revamping relief procedures without substantive loss of security protection.

13. Riot Control

At the request of Saigon station a study was made of available foam throwers and tear gas dispensers and a report on the results of this study were forwarded to Saigon.
